

# WILLIAM INSELMAN

SENIOR SOLUTIONS ENGINEER | CUSTOM SOFTWARE | CLIENT-FACING TECHNICAL LEADERSHIP

Lone Grove, Oklahoma | 580-465-4804 | william@insemandigital.com | insemandigital.com

## PROFESSIONAL SUMMARY

---

Client-facing software builder and technical problem solver with 20+ years of hands-on web/programming experience and a background spanning custom application development, software testing, IT support, remote operations, and field-based industries. Founder of Inselman Digital LLC, where I translate non-technical operational problems into working software, own projects from discovery through deployment, and use AI-assisted workflows across requirements, architecture, development, testing, and go-live. Comfortable working directly with business owners, executives, and field users in fast-moving environments with limited oversight.

## SUSCO-ALIGNED STRENGTHS

---

- Requirements discovery & business analysis
- Custom web application design & delivery
- JavaScript, HTML/CSS, Java, Python, basic SQL
- Git/version control & release discipline
- AI-assisted SDLC & rapid prototyping
- Connectivity / desktop / Windows troubleshooting
- Client-facing technical leadership
- Solution architecture & systems thinking
- Firebase / cloud-hosted application workflows
- Software testing, QA & defect isolation
- Technical demos, proposals & stakeholder communication
- Independent project ownership from discovery to delivery

## RELEVANT EXPERIENCE

---

### Founder / Custom Software Developer — Inselman Digital LLC

2026–Present | Oklahoma / Remote

- Lead requirements discovery directly with business owners and field users, convert operational pain points into system requirements, and deliver custom software from concept through deployment.
- Built and deployed Cattle Handler™, a paid commercial livestock-operations application, including role-based workflows, treatment tracking, reporting, offline-aware behavior, diagnostics, auditability, and ongoing customer support.
- Designed RIGR™, an edge-readiness prototype integrating sensor ingestion, source provenance, fault handling, offline operation, evidence export, and a simplified operator-facing status model; currently integrating live Polar H10 BLE telemetry.
- Developed Station Handler™, a public-safety readiness prototype covering apparatus battery monitoring, gateway health, roster/training readiness, equipment tracking, and demo/test workflows.
- Use AI-assisted development throughout the SDLC for requirements refinement, architecture, coding, QA, troubleshooting, documentation, deployment, and iteration while maintaining direct ownership of technical decisions and final outputs.
- Create technical demonstrations, capability materials, proposals, and stakeholder presentations for commercial customers, research organizations, and government innovation programs.

### Property Claims Adjuster / Remote File Reviewer — B&K Adjusters / Field Pros Direct

2019–Present | Remote / Oklahoma

- Review complex property-claim files remotely for accuracy, scope, documentation quality, and consistency; identify defects, missing information, and resolution paths with minimal supervision.
- Translate field documentation and technical details into clear decisions and written communication for internal and external stakeholders.
- Operate independently in deadline-driven workflows while maintaining licensing in Oklahoma, Texas, and Florida.

## Help Desk Engineer, Software Tester & Release Support — Software / IT Roles

5 years | Windows environments

- Supported end users, diagnosed software and connectivity issues, reproduced defects, documented root causes, and communicated solutions to technical and non-technical users.
- Tested Windows software and installer packages using InstallAware, Advanced Installer, and Inno Setup; supported build/release workflows with Jenkins and version control.
- Used scripting and programming, including VB and Python, to troubleshoot, automate, validate, and improve software delivery processes.

## Lease Operator / Pumper — Kingery Drilling / Altman Energy

8 years | Oklahoma

- Owned daily operation and troubleshooting of production assets in a field environment where reliability, safety, prioritization, and independent decision-making were essential.
- Worked across mechanical, operational, and reporting problems with limited supervision—experience that now informs practical, field-first software design.

## SELECTED SOLUTIONS PORTFOLIO

---

- Cattle Handler™ — Commercial custom application for cattle-yard operations; paid implementation with recurring maintenance. Designed around rapid field entry, treatment workflows, reporting, user roles, and operational visibility.
- RIGR™ — Sensor-fusion / readiness R&D prototype focused on turning heterogeneous telemetry into simple operator decisions with provenance, fault isolation, offline resilience, and evidence capture.
- Station Handler™ — Fire/EMS readiness prototype integrating apparatus battery status, communications/gateway health, roster readiness, training, and equipment workflows.

## TECHNICAL TOOLKIT

---

**Languages / Web:** JavaScript, HTML, CSS, Java, Python, VB, basic SQL | **Platforms / Tools:** Firebase, Git/version control, Jenkins, Windows, InstallAware, Advanced Installer, Inno Setup | **Practices:** requirements elicitation, system design, rapid prototyping, testing/QA, deployment, troubleshooting, documentation, AI-assisted SDLC

## EDUCATION & CREDENTIALS

---

**Associate of Science — East Central University, 2004**

Property Adjuster Licenses: Oklahoma, Texas, Florida

## ADDITIONAL

---

Available for fully remote Central Time work and occasional client-site travel. Comfortable learning unfamiliar stacks and industries quickly.
